

Clause Tracer

Logo guide

The butterfly beside the name · November 2026

The logo

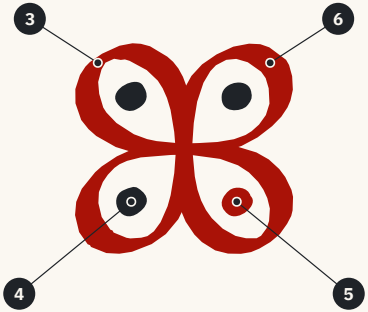

The name, led by one drawn butterfly: a careful reader's mark in the margin, beside the line it points to.

What each part means

1 The name

IBM Plex Serif SemiBold, the app's own heading face. A serif from the world of printed agreements: formal, serious, easy to read.

2 The mark in the margin

The butterfly leads the name, 1.6 × the height of the capitals, like a mark a careful reader makes in the margin beside the line that matters.

3 Two wings, one line

Two wings for the two sides of an agreement, drawn without lifting the pen. The line is the reader's path through the contract, our red thread: around each clause, never through it.

4 Four eyespots

The clauses. Butterflies use eyespots to make a predator look twice; each spot is a place to look closely. Nothing is skipped.

5 The red eyespot

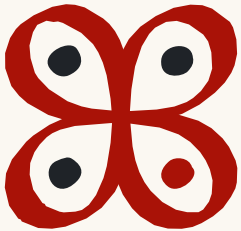

The one that matters. Red is reserved for the line you won't cross (ADR 0003), so only one spot is red.

6 The broad nib

Drawn, not built: a flat nib at 30°, thick and thin as it turns, lighter where the pen lands and lifts. A careful person reading, not a machine stamping.

The symbol and the colours

The butterfly alone is the app icon and favicon. It keeps its four eyespots down to 16 px.

Construction and use

Size

The butterfly is 1.6 × the height of the capitals and sits centred halfway up them.

Space

The gap between the butterfly and the C is 0.45 × the cap height, measured from the ink, not the box.

Clear space

Keep one cap height of the name clear on every side. Nothing else enters it.

Minimum size

The logo: 120 px or 30 mm wide. The butterfly alone: 16 px or 5 mm.

On dark

Use the reversed logo: light name and eyespots, the butterfly's line stays oxblood.

Don't

Recolour the name red, move the butterfly between the words or after the name, outline or shadow it, redraw the line, add a fifth eyespot, or repeat it as a pattern.

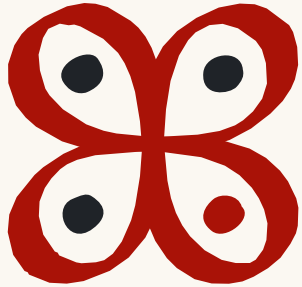

Why a butterfly

Look twice

Many butterflies carry eyespots. They make a predator look twice, and they draw an attack away from the parts that matter. Clause Tracer does the same for a contract: it makes you look twice, and it points your attention to the clause that matters, with the exact words to back it up.

Two wings, two sides

A contract joins two parties, the way a butterfly's wings meet at its body. A butterfly flies only when both wings carry their share. So does a fair deal.

One unbroken line

The mark is drawn as one line around four points, never touching them: the red thread, the reader's path through the contract. That rule is shared by the sand drawings of the Chokwe people of eastern Angola (sona) and the threshold drawings of Tamil Nadu (sikku kolam), and we credit both for it. The butterfly itself is our own figure, not a copy of either.

Once, where it means something

The mark appears once, where it means something. Other butterflies in a picture are ordinary ones; the logo is never repeated as a pattern.
